Hamilton County Mental Health and Recovery Services Board (MHRSB) provides leadership in public behavioral health care as the authority charged under ORC §340 with planning, funding, managing, and evaluating behavioral health care in Hamilton County. MHRSB is statutorily prohibited from providing direct care to clients and instead contracts with numerous non-profit agencies to provide direct care in a community-based setting.

The mission of the Hamilton County Mental Health and Recovery Services Board (MHRSB) is to develop and manage a continuum of mental health, addiction, and prevention services that have a positive impact on the community, are accessible, results oriented, and responsive to individual and family needs.

MHRSB Primary Goals:

- Provide a System of Care with a wide array of Evidence Based Treatment Services that ensures a high quality of care for Hamilton County residents and promotes recovery and a favorable quality of life.
- Promote prevention and education efforts that reduce the impact of mental illness and addiction in the community.
- Ensure individuals with behavioral health needs are treated in an environment that best meets their needs.
- Ensure financial viability of the MHRSB and its service delivery system through efficient, accountable, and responsible financial management.

Recovery means something different to everyone. For some, it is a newfound ability to cope with a lifelong mental illness. For others, it means freedom from a debilitating addiction. Our objective is for every client to lead a productive, satisfactory life characterized by hope, empowerment, and a meaningful role in society.

Clients
MHRSB serves over 30,500 mental health and addiction clients on an annual basis.

Drug addiction is a character flaw, right?

No, drug addiction is a brain disease. Every drug, from alcohol to heroin, has its own mechanism of changing how the brain functions.

For individuals with a substance use disorder, the drug becomes the single most powerful motivator in their life.

People are often uncomfortable talking about alcohol and drug dependencies because there are many elements of the disease which are misunderstood. Accurate, up-to-date, scientific information is the beginning of treating people with addictive disease with dignity and respect and stopping stigma.

MYTH
People don’t need treatment. They can stop using drugs if they really want to.

FACT
It is extremely difficult for people addicted to drugs to achieve and maintain long-term abstinence. Research shows that long term drug use changes a person’s brain function, and increases drug cravings making it more difficult for people to quit without treatment.

Don’t people have to hit rock-bottom before they seek treatment?

Absolutely not. People enter treatment for many reasons — pressure from family and employers, as well as realizing they have a problem. There are many reasons people seek treatment.

Parents and school administrators are often able to get teens into treatment before situations become dire.

**Assessment** begins with a face-to-face interview with a registered client so that reasonably full understanding of the nature of the abuse, misuse and/or addiction to alcohol and/or other drugs (AOD) can be gained in order that appropriate treatment can be recommended. With child clients, the interaction may also include face-to-face contact with family members (parents, guardians, foster parents) and/or essential others external to the agency. The child client does not need to be present.

**Case Management** services are those activities provided to assist and support individuals in gaining access to needed medical, social, educational and other services essential to meeting basic human needs. Case management services may include interactions with family members, other individuals or entities.

**Consultation** is cross-system or within-system collaboration on behalf of an individual to assist in accessing alcohol and other drug services. This process may include family members or other significant persons.

**Crisis Intervention (Psychotherapy w/Crisis)** services involve a face-to-face response to a crisis or emergency situation experienced by a client, family member and/or significant other. Crisis intervention services can be provided at a program site or in the client’s natural environment. The goal of crisis intervention services is to provide or assist the person(s) in obtaining those services necessary to stabilize the crisis situation.

**Family Counseling** involves sessions with individuals and their family members and/or significant others under the guidance of a counselor to address family and relationship issues related to alcohol and other drug (AOD) abuse and/or dependence for the purpose of promoting recovery from addiction. Family counseling services can be provided at or in the natural environment of the client.

**Group Counseling** services assist two or more individuals in achieving treatment objectives. This occurs through the exploration of alcohol and other drug problems and/or addiction and their ramifications, including an examination of attitudes and feelings, consideration of alternative solutions and decision making and/or discussing information related to alcohol and other drug related problems.

**Hotline** services are part of an integrated, comprehensive system of alcohol and drug addiction services for the purpose of short-term intervention and crisis management. These are recipient-initiated discussions, generally anonymous, and telephone calls on the part of the agency as follow up to these discussions for crisis assistance and/or assistance with problems of daily living. The recipient may or may not be or become a client of the agency. The service is available twenty-four hours per day, seven days per week.

**Individual Counseling** involves a face-to-face encounter between a client or client and family member and a counselor. Individual counseling means the utilization of special skills to assist an individual in achieving treatment objectives through the exploration of alcohol and other drug problems and/or addiction and their ramifications, including an examination of attitudes and feelings, consideration of alternative solutions and decision making and/or discussing educational materials with regard to alcohol and other drug related problems. Individual counseling services can be provided at a program site or in the client’s natural environment.
Intensive Outpatient services are structured individual and group alcohol and drug addiction activities and services that are provided at a certified treatment program site. Intensive outpatient services shall include, but are not limited to, the following: assessment, individual counseling, group counseling, crisis intervention and case management.

Laboratory Urinalysis/Urine Dip Screen is the testing of an individual’s urine specimen to detect the presence of alcohol and other drugs. Urinalysis includes laboratory testing and/or urine dip screen.

Medication Assisted Treatment (MAT) is the use of pharmacological medications in combination with counseling and behavioral therapies to provide a “whole patient” approach to treatment of substance use disorders.

Medical Somatic services are medical services, medication administration services and the dispensing of medications in an alcohol and other drug treatment program. Medical somatic services shall be delivered at a program site certified by the Ohio Department of Mental Health and Addiction Services (OhioMHAS).

Methadone Administration (opioid agonist administration) is defined as the administration or dispensing of an opioid agonist to an individual only for the treatment of narcotic addiction by an alcohol and other drug treatment program licensed OhioMHAS. The opioid agonist treatment service (methadone) is a safe and effective treatment for opiate addiction.

Non-Medical Community Residential Treatment provides a twenty-four-hour rehabilitation facility, may include twenty-four-hour-per-day medical/nursing monitoring, where a planned program of professionally directed evaluation, care and treatment for the restoration of functioning for persons with alcohol and other drug problems and/or addiction occurs. (Level of care depends on ASAM criteria.)

Outreach is provided to persons who are not enrolled as consumers in the AOD System. These persons may be in need of treatment, but not yet connected with the system. Outreach Services are designed to identify and begin to engage those persons.

Peer Support Services are delivered to consumers by persons with similar AOD issues and are intended to provide consumers with information and support from those who have had similar life experiences.

Prevention Alternatives is an AOD prevention strategy that focuses on providing opportunities for positive behavior support as a means of reducing risk taking behavior, and reinforcing protective factors. Alternatives programs include a wide range of social, recreational, cultural and community service/volunteer activities that appeal to youth and adults.

Prevention Community Based Process is an AOD prevention strategy that focuses on enhancing the ability of the community to provide prevention services through organizing, training, planning, interagency collaboration, coalition building and/or networking.

Prevention Education is an AOD prevention strategy that focuses on the delivery of services to target audiences with the intent of affecting knowledge, attitude and/or behavior. Education involves two-way communication between educator/facilitator and participant.
MYTH
Treatment for addiction should be a one-time deal.

FACT
Drug addiction, like many other diseases, is a chronic disorder. Some people can quit by themselves or can stop after one treatment but most people require longer and repeated treatments.

Prevention Environmental is an AOD prevention strategy that represents a broad range of activities geared toward modifying systems in order to mainstream prevention through policy and law. The environmental strategy establishes or changes written and unwritten community standards, codes and attitudes, thereby influencing the incidence and prevalence of alcohol and other drug use/abuse in the general population.

Prevention Information Dissemination is an AOD prevention strategy that focuses on building awareness and knowledge of the nature and extent of alcohol and other drug use, abuse and addiction and the effects on individuals, families and communities, as well as the dissemination of information about prevention, treatment and recovery support services, programs and resources. This strategy is characterized by one-way communication from source to audience, with limited contact between the two.

Prevention Problem Identification & Referral is an AOD prevention strategy that refers to intervention oriented prevention services that primarily target clients to address the earliest indications of an AOD problem. Services focus on preventing the progression of the problem.

Recovery Housing is characterized as a safe and healthy living environment that promotes abstinence from alcohol and other drugs and enhances participation and retention in traditional clinical treatment.

Recovery Supports are services and supports that help people develop resiliency and recovery from mental and/or substance use disorders. Those services may include transportation, housing and vocational services.

Referral and Information provides the public with assistance in understanding the alcohol and drug addiction system as it relates to care and assistance in accessing appropriate programs of service.

Room & Board is the provision of sleeping and living space, housekeeping, meals, and/or meal preparation, and laundry for a period of twenty-four hours or more. This service is for clients enrolled in treatment for alcohol and/or drug abuse and does not include clinical and therapeutic services.

Smoking Cessation is a process of behavioral health treatments for nicotine dependence.

Supplemental Behavioral Health Services is an OhioMHAS designation which incorporates a variety of services which are defined by the Mental Health and Recovery Services Board and are certified by the Ohio Department of Mental Health and Addiction Services (OhioMHAS). Services in this category include representative payee, screening, education and other supportive behavioral health services.

Specialized Docket Services are funded through Ohio MHAS to provide a particular session of court that offers a therapeutically oriented approach to providing court supervision and appropriate treatment to individuals.

Sub Acute Detoxification refers to detoxification services provided with twenty-four-hour medical monitoring. Services are of brief duration with linkage to other formal services. Sub-acute detoxification may be provided in a hospital setting as a step-down service from acute detoxification, or may be provided in a free-standing setting with medical monitoring. This service is supervised by a physician, under a defined set of policies and procedures, who is licensed by the State of Ohio Medical Board.
Mental illnesses can’t affect me.

Mental illnesses do not discriminate — they can affect anyone and they impact almost every family in America.

Sometimes people are afraid to talk about mental health because there are many misconceptions about mental illness. Learning the facts is the first step to treating people with mental illnesses with respect and dignity and stopping discrimination.

MYTH
Mental illnesses are the result of a weakness of character.

FACT
Mental illnesses are caused by a combination of psychological and social factors. Research shows us that genetic and biological factors are associated with schizophrenia and depression. Social influences, such as the loss of a loved one or a job, can also contribute to the development of various disorders.

Therapy and self-help are wastes of time, aren’t they? Can’t I just take one of those pills I hear about on TV?

Not so fast — treatment should be determined by your needs and input from therapists, counselors, peers, psychologists and psychiatrists, nurses, and social workers should be part of your recovery plan. Recovery plans often include medications, self-help strategies and take advantage of community supports.

Behavioral Health (BH) Counseling and Therapy - Group is a counseling/psychotherapy service provided to a group of participants. This differs from individual counseling/psychotherapy in that the group has predefined goals and objectives.

BH Counseling and Therapy - Individual is a series of time-limited, structured sessions with a therapist, where the consumer works toward the accomplishment of mutually agreed upon treatment goals.

BH Hotline services are provided for the purpose of short-term intervention and crisis management. The services include generally anonymous recipient-initiated discussions and telephone calls on the part of the agency as follow up to these discussions for crisis assistance and/or assistance with problems of daily living. The service is available twenty-four hours per day, seven days per week.

BH Urgent Care services offer a range of support for the parent and child in the time of crisis. The services can include rapid assessment, crisis intervention, and de-escalation, psychoeducation, cognitive behavioral skill-building, care and safety planning. The goal is to help resolve the crisis, reduce stress and make the connection to ongoing support.

Community Psychiatric Supportive Treatment (CPST) - Individual and Group (Previously known as Community Support Program) is a rehabilitation and environmental support system of targeted case management activities that are considered essential in helping persons gain access to necessary services. The goal of community psychiatric supportive treatment is maximum symptom reduction and a return of the person to the best possible functional level. Community support activities may include: development of interpersonal and community coping skills; developing strategies and skills for adapting to home, school or work environments; symptom monitoring and management; financial management; and personal development. CPST is provided both as an individual service and in small groups.

Community Support offers activities to adults and children that are specific to sharing lived experiences with others who may be in a similar situation regarding mental, emotional, and behavioral health; or services to support persons experiencing Mental Emotional Behaviors needs in a group setting.

Consultation Services address mental health needs in varied community settings (e.g., daycare centers, classrooms, health clinics, etc.) and professionals in these settings identify potential mental health needs of their respective populations.

Consumer-Operated Services are those planned, developed, administered, delivered and evaluated by groups and individuals of whom a majority are themselves consumers of mental health services. Services include the Warmline twenty-four hour peer-operated call-in service for consumers who need the support, Wellness Club and the consumer-operated Recovery Center.
Employment Services include job skills training and support on and off the work site during a term of employment. Support services include instruction to the client on the job, monitoring of performance and productivity, support and feedback about job performance, establishing and maintaining on-going communication with the site supervisor and maintaining data on the client’s work performance and personal adjustment.

Forensic Evaluation Services address mental health and legal issues. These services include, but are not limited to, competency to stand trial, pre-sentence investigations, domestic violence evaluations, evaluation for revocation of parole, and evaluation of the psychological effects of an act upon the victim.

Information and Referral Services is an out-reach program that provides the public with assistance in understanding the mental health system as it relates to psychiatric care and assists the public in accessing appropriate programs of service.

Inpatient Hospitalization Services are provided at psychiatric hospitals or on the psychiatric unit of a community-based hospital. Residence and treatment are provided to consumers with the goal of stabilization and return to the community.

Intensive In-Home Services are designed to provide individualized support services responsive to the client’s needs at the time of delivery in the client’s natural environment (home, school, etc.), preventing the need for treatment outside of the natural environment.

MH Assessment, Non-physician (Previously known as Diagnostic Assessment) is a face-to-face interview with a registered client so that reasonably full understanding of the nature of the problem can be gained in order that appropriate treatment can be recommended. Includes communication of diagnostic test results and recommendations in face-to-face session with client present. May include face-to-face contact with client by an appropriately qualified provider during which formalized psychological tests are administered.

MH Residential Care - Community Residence refers to private homes or separate apartments licensed by the state as Residential Care Facilities which may be owned/operated by a private provider. These homes/apartments generally house one to five clients who are supervised by the provider/owner. Placement in these facilities is for the purpose of providing transitional support for increased independent living and personal care as assessed need indicates. Therapeutic Foster Care for children is included in this service.

MH Residential Care – Comprehensive (includes Crisis/Respite) refers to intensive residential treatment facilities that are designed for short-term stays. They are licensed and fully staffed to provide a range of mental health services that support intensive psychiatric stabilization for clients experiencing acute episodes of emotional difficulty.
MYTH
Once people develop mental illnesses they will never recover.

FACT
Studies show that most people with mental illnesses get better and many recover completely.

Recovery refers to the process in which people are able to live, work, learn, and participate fully in their communities.

For some, recovery is the ability to live a fulfilling and productive life. For others, recovery implies the reduction or complete remission of symptoms. Science has shown that having hope plays an integral role in a person’s recovery.

MH Residential Treatment Facility refers to residential treatment facilities that conduct transitional, congregate programs providing a variety of mental health and other support services. Such services include assistance with basic personal care, management of personal space, training for increased, independent community living, and appropriate integration of the client’s treatment plan with residential treatment. All residential treatment facilities are licensed and fully staffed.

Mental Health Education Services is an outreach program focused on educating the community about the nature and composition of specific community support programs.

Mental Health Temporary Housing is a time-limited quick-access housing program with a maximum authorized length of occupancy and goals to transition to permanent housing. Meals are generally not included but are arranged elsewhere. Treatment services are not provided. Clients served are homeless or at high risk of becoming homeless.

Mobile Crisis Team Services is a mobile service that can intervene in crisis situations anywhere in Hamilton County. The health officers who staff the service are under direct supervision of qualified psychiatrists through telephone contact and can initiate, when indicated, referral of patients to the nearest emergency service for medical or psychiatric evaluation.

On-Site Emergency — Crisis Intervention Services apply to Hamilton County residents but may be utilized by residents from other parts of the state and country who are temporarily in Hamilton County when experiencing a psychiatric emergency.

Supplemental Behavioral Health Services is an OhioMHAS designation which incorporates a variety of services which are defined by the Mental Health and Recovery Services Board and are certified by the Ohio Department of Mental Health and Addiction Services (OhioMHAS). Services in this category include representative payee, screening, education and other supportive behavioral health services. Services provided by the Sheriff’s Department, the Probation Department, Juvenile Court and Pre-Trial are included in this category.

Outreach Services are provided to persons who are not enrolled as consumers in the mental health system. These persons may be in need of treatment, but not yet connected with the system. Outreach services are designed to identify and begin to engage those persons.

Partial Hospitalization refers to a day measured program for adults or children, which addresses the needs of clients with significant behavioral health problems who require a structured goal-oriented program which provides an integrated set of individualized treatment interventions.
Payee Services are provided to consumers who require assistance with managing their SSI/SSDI or other financial benefits. When payee services are established, an assigned payee receives the consumer’s benefits and works with the client to develop and maintain a monthly budget. The payee is responsible for ensuring that the consumer’s bills are paid in a timely manner.

Peer Support Services are delivered to consumers by persons with similar mental health issues and are intended to provide consumers with information and support from those who have had similar life experiences.

Pharmacologic Management (Previously known as Medication/Somatic) is a service conducted for the purpose of prescribing and/or supervising the use of psychotropic medication and other medications that, at times, may also include medical assessment and medical treatments. This service is provided in face-to-face contact between a licensed physician/psychiatrist or a registered nurse and an enrolled client. Pharmacologic Management service includes the responsibility for evaluating the client’s progress, adjustment to medication, and need for medication change.

Prevention Alternatives is an AOD prevention strategy that focuses on providing opportunities for positive behavior support as a means of reducing risk taking behavior, and reinforcing protective factors. Alternatives programs include a wide range of social, recreational, cultural and community service/volunteer activities that appeal to youth and adults.

Prevention Community Based Process is an AOD prevention strategy that focuses on enhancing the ability of the community to provide prevention services through organizing, training, planning, interagency collaboration, coalition building and/or networking.

Prevention Education is an AOD prevention strategy that focuses on the delivery of services to target audiences with the intent of affecting knowledge, attitude and/or behavior. Education involves two-way communication between educator/facilitator and participant.

Prevention Environmental is an AOD prevention strategy that represents a broad range of activities geared toward modifying systems in order to mainstream prevention through policy and law. The environmental strategy establishes or changes written and unwritten community standards, codes and attitudes, thereby influencing the incidence and prevalence of alcohol and other drug use/abuse in the general population.

Prevention Information Dissemination is an AOD prevention strategy that focuses on building awareness and knowledge of the nature and extent of alcohol and other drug use, abuse and addiction and the effects on individuals, families and communities, as well as the dissemination of information about prevention, treatment and recovery support services, programs and resources. This strategy is characterized by one-way communication from source to audience, with limited contact between the two.
Not so. In any given year, 5-9% of children experience serious emotional disturbances. As in adult mental illnesses, these are clinically diagnosable health conditions resulting from the interaction of biological, psychological, social, and genetic factors.

Children don’t get mental illnesses — that’s just bad parenting.

Prevention Problem Identification & Referral is an AOD prevention strategy that refers to intervention oriented prevention services that primarily target clients to address the earliest indications of an AOD problem. Services focus on preventing the progression of the problem.

Psychiatric Diagnostic Interview with Physician (Previously known as Diagnostic Assessment). Provider must be a physician. A face-to-face interview is conducted with a registered client so that reasonably full understanding of the nature of the problem can be gained and appropriate treatment can be recommended. The contact may include completion of clinical forms. The service includes communication of diagnostic test results and recommendations in face-to-face session with client present. With child clients, the interaction may also include face-to-face contacts with family members (parents, guardians, foster parents) and/or essential others external to the agency. The child client does not need to be present.

Referral and Information Services provide the public with assistance in understanding the mental health system as it relates to psychiatric care and assistance in accessing appropriate programs of service.

Residential Support Services are provided, by associated personnel, to consumers who are in permanent apartments, single room occupancy or permanent shared living arrangements. For example, consumers may share a home or reside in an apartment building where a resident manager also resides. This resident manager provides support and monitors the consumer with a focus on improvement of daily living. Most residential support is provided by off-site personnel but support can be available 24 hours a day, seven days a week.

Social & Recreational Services are, whenever possible, provided in facilities that are used for social and recreational purposes by all members of the community. These services promote coordination among similar providers and the community in order to maximize rehabilitation opportunities for consumers.

Specialized Docket Services are funded through Ohio MHAS to provide a particular session of court that offers a therapeutically oriented approach to providing court supervision and appropriate treatment to individuals.

Subsidized Housing differs from community residence in that minimal or no mental health services are coupled with the rental or occupancy. These funds are used largely for housing development, management and subsidy support. This housing is available only to those who are severely mentally ill and are enrolled as consumers of mental health services.

Vocational Services assist the consumer with identifying, obtaining, or maintaining employment. This service is focused on the preferences of the consumer and oriented toward career exploration and training for integrated, competitive employment. Vocational services promote the coordination of providers and systems in order to maximize consumers’ rehabilitation opportunities.
